

Admin user profile

Does Coro support SAML or OIDC/PWless Authentication so customers can integrate Coro into their SSO/IAM platform?

The Primary Admin (the individual who registered for the service) can log in using MS/Google authentication. Currently, this is not supported for additional administrators.

How do I configure Two-factor authentication (2FA) from the Coro console?

2FA is supported by Coro to reduce the risk of unauthorized access to your Coro console.

For further information, see **[Two-factor authentication \(2FA\)](#)**.
