

Endpoint Agent

Does the Coro Agent require an internet connection at all times?

The Coro Agent is fully autonomous and does not require connectivity for its operation. Occasional networking is needed to report findings to Coro servers, as well as to get updated on any changes to device posture policy and threats database.

How much disk space is required by the Coro Agent?

Approximately 1.5GB, of which over 1.2GB is devoted to the security knowledge base, which allows the client to operate autonomously.

How much memory does the Coro Agent consume?

The amount of memory consumed under normal conditions is approximately 400MB. During scanning, memory usage is determined by the size of the files to be scanned.

What is Tamper Protection?

Coro Agent **Tamper Protection** prevents malicious software from terminating or interfering with the Coro Agent, thereby disabling protection. **Tamper Protection** settings can be found in the Coro Console by navigating to **Control Panel > Devices > Settings**.
