

# Restoring archived workspaces

Managed Service Provider (MSP) administrators and admin users with **sufficient permissions** can restore **archived workspaces**. The workspace is restored as "Inactive". To use it, activate the workspace by connecting cloud applications, adding users for protection, and configuring the protection settings.

To restore an archived workspace:

1. **Access the Manage Workspaces portal.**
2. Select **Restore workspace** from the three-dot menu of the inactive workspace you want to restore:

The screenshot shows the CORO.NET interface for managing workspaces. At the top, there is a navigation bar with the CORO.NET logo and several icons. Below the navigation bar, the page title is "Manage workspaces" and there is an "ACTIONS" dropdown menu. The main content area features a table with columns for Name, Status, Created on, Users, User potential, Devices, and Last Active. There are also filter buttons for "Clear All", "Status", "Modules", and "Type", along with a search bar. The table contains two rows of workspace data. The first row is for a workspace named "Kat... Child" with a status of "Archived" and a "Restore workspace" button highlighted in a pink box. The second row is for a workspace named "W... Child" with a status of "Inactive".

Name	Status	Created on	Users	User potential	Devices	Last Active	
Kat... Child	Archived Fri, Sep 29 2023	Thu, Sep 28 2023	0	0	0	less than a	Restore workspace
W... Child	Inactive Mon, Sep 18 2023	Thu, Jun 29 2023	0	0	0	---	⋮

A confirmation dialog appears.

3. Select **CONFIRM**.

The workspace is restored as "Inactive".
