

Managing workspace subscriptions

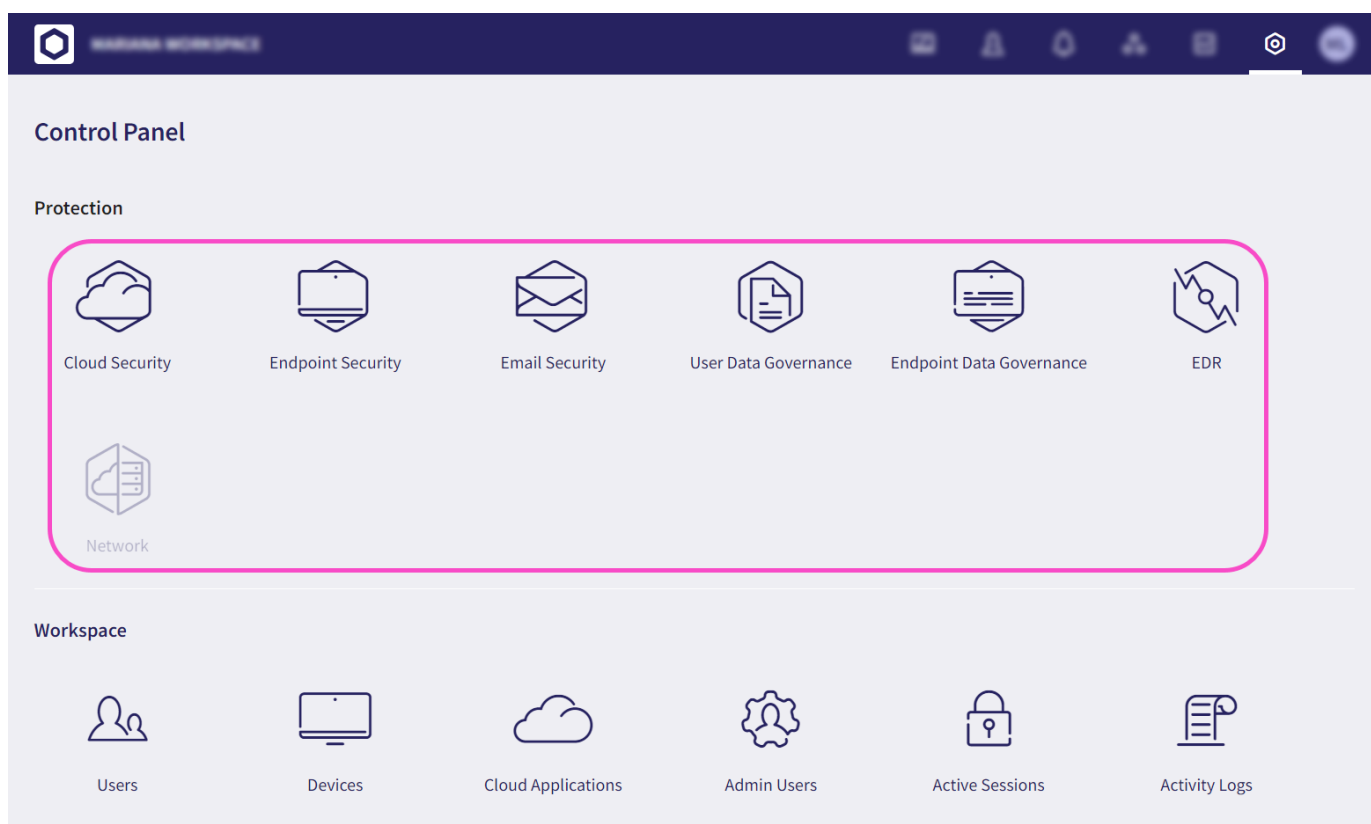

Managed Service Provider (MSP) administrators and admin users with **sufficient permissions** create and manage workspace subscriptions by assigning:

- **Bundles:** Predefined packages consisting of interrelated modules and add-ons related to a particular security domain, for example, Endpoint Protection. You can add and remove bundles from a subscription. You can also customize a selected bundle by adding additional modules and add-ons.
- **Modules and add-ons:** Standalone cybersecurity features, for example, Email Security. You can assign specific modules and add-ons to include in a subscription without selecting a predefined bundle.

Warning

Adding or removing modules and add-ons from a bundle impacts the subscription price.

Workspace subscriptions determine which modules are displayed in the Coro workspace:
