

Coro agent specifications

Overview

The Coro Agent actively secures endpoint devices on both Windows and macOS platforms. The following hardware and software specifications are essential for guaranteeing effective functionality of the Coro Agent on your Windows or macOS device.

For general information on the Coro Agent, see [Introducing the Coro Agent](#).

Note

The Coro Security Platform utilizes a Bitdefender Software Development Kit (SDK). To avoid conflicts that might interfere with the installation of the Coro Agent, Bitdefender and any other antivirus software based on Bitdefender must be uninstalled prior to installing the Coro Agent.

Warning

Windows operating systems running on ARM-based processors are not supported by the Coro Security Platform.

Hardware and system specifications

Windows and macOS devices require the following hardware and system specifications to run the Coro Agent:

Windows

The following hardware and system specifications are required on Windows devices:
