

Introducing cloud security

Coro's **Cloud Security** module is a Cloud Access Security Broker (CASB) based solution, providing advanced malware and ransomware detection and remediation for connected users and their cloud drives. This includes detection of:

- access violations
- malware in cloud drives
- mass data download or deletion
- identity compromise
- suspected bot attacks

Connecting your cloud applications

Coro's Cloud Security module allows you connect to your organization's cloud applications, ensuring monitored, protected, and controlled user access.

To connect to a cloud application, **log into the Coro console** and select **Control Panel > Cloud Applications**:
