

Mass event tickets

Coro provides two ticket types for detected data exposure in large amounts:

- **Mass Data Download**
- **Mass Data Deletion**

These ticket types are created when abnormally large amounts of data deletion or data download is detected from cloud application accounts of individual users.

The screenshot displays the Coro Ticket Log interface. At the top, there is a navigation bar with a logo, a search bar, and a user profile icon labeled 'ML'. Below the navigation bar, the 'Ticket Log' section is visible, with tabs for 'Open', 'Closed', and 'All'. The 'Open' tab is selected. A search bar with a magnifying glass icon and the text 'Search...' is present. Below the search bar, there are filters for 'Users', 'Type', and 'During'. A 'Clear All' button is located to the left of the filters. The main content area shows a list of tickets on the left and a detailed view of a selected ticket on the right. The selected ticket is titled 'Mass Data Download' and has a timestamp of 'Jan, 26 2023 , 3:55 PM'. The detailed view shows the ticket ID '6ISL-1976' and an 'ACTIONS' button. The ticket details are organized into sections: 'Users' (admin@coroqa.com), 'Key Details' (IP / Country: 52.15.102.53 ()), 'When' (From: Jan, 26 2023 , 3:50 PM; To: Jan, 26 2023 , 3:55 PM), and 'Service' (Dropbox).

To identify mass data events, Coro creates and uses normative and non-normative behavior models for individual users, customers as an organization, and a set of global models capturing the patterns of all Coro customers. A ticket is created when the behavior of a user falls outside of these parameters.

Mass data event tickets are closed immediately by Coro as remediated. An Admin user can review mass data event tickets in the **Ticket Log**, and can review information such as the cloud **Service** used for the event, and full details of the files involved, in order to determine if action should be taken.

For more information about ticket types, see [Ticket types for Cloud Security](#).
