# Endpoint Data Governance

To alert organizations to possible data breaches, Coro can scan for and identify potential violations related to storage of sensitive data on endpoint device drives. Violations revealed by a scan are reported to the workspace in Endpoint Data Governance tickets.

> **Note**
>
> Coro does not actively monitor for data governance violations in endpoint drives. An Admin user must initiate a scan on a protected device to reveal potential policy violations.

A summary of your Endpoint Data Governance coverage is shown in the **Endpoint Data Governance** dashboard panel:

> **Note**
>
> Select the icon in the top-right of the panel to access the **Endpoint Data Governance** configuration page.
