

Viewing a summary report

The executive summary report offers a detailed overview of the security status and activities within a workspace. It features a dynamic structure that adapts to the specific modules enabled in the workspace and the tickets generated within the selected reporting period.

The report is divided into several key sections, including:

- a general overview highlighting protected users, devices covered, and generated tickets
- the top vulnerabilities for the workspace
- tickets and top vulnerabilities for each module

The report is available for download as a PDF. You can select a custom date range for the report, and any modules enabled during that time are included.

To access the summary report:

1. **Sign into the Coro console.**
2. Navigate to **Control Panel > Reports.**
