

Coro Endpoint Detection and Response (EDR)

Coro's Endpoint Detection and Response (EDR) module is a stand-alone add-on that focuses on detecting and responding to advanced threats targeting endpoints. Coro EDR continuously collects telemetry data from endpoints to monitor for suspicious activities, malicious behaviors, or signs of compromise.

By providing real-time visibility and analysis of endpoint activities, Coro EDR empowers security teams to swiftly identify and mitigate potential threats, reducing the impact of cyber incidents. Coro EDR identifies threats and allows security teams to take the necessary actions to remediate the impact of these identified threats.

The benefits of Coro's EDR module include:

- **Real-time Visibility:** Real-time visibility into endpoint activities, allowing security teams to monitor and analyze potential threats as they occur.
- **Threat Detection:** Advanced detection techniques to identify and respond to sophisticated threats.
- **Incident Response:** Rapid incident response by providing actionable insights.
- **Endpoint Protection:** Endpoints are protected from malware, ransomware, and other malicious activities, improving endpoint security posture.
- **Behavioral Analysis:** Behavior-based analysis to identify anomalies and suspicious activities, helping to detect stealthy threats.

Coro's EDR module includes the following components:

- **Processes page**
- **Telemetry page**
- **EDR Allow/Block lists**
