

Scheduling a sensitive data scan

Coro enables you to create scheduled endpoint device sensitive data scans for storage drives on Windows and macOS devices. These scans activate at a specified time and frequency, for example, every Friday at 3 a.m.

Note

If a device is offline during a scheduled scan, the scan automatically starts when the device reconnects to Coro.

Configuring a scheduled sensitive data scan

To configure a new scheduled sensitive data scan:

1. **Sign into the Coro console** and select **Control Panel** from the toolbar:

2. Select **Endpoint Data Governance**:
