System Integrity Protection Disabled

System Integrity Protection (SIP) protects the entire system by preventing the execution of unauthorized code on *macOS* devices. During development, temporarily disabling SIP may be required in order to install and test code.

Creating a new System Integrity Protection Disabled policy
To create a new **System Integrity Protection Disabled** policy:

1. From the **Device Posture** tab, select **+ ADD**:

2. Select **Add to macOS**.

    The **Add new device policy to macOS** dialog appears.

> | **Note** |
> | --- |
> | The **System Integrity Protection Disabled** device policy is currently supported for *macOS* devices. |

3. Select **System Integrity Protection Disabled** from the **Select policy type** dropdown.
