

Deploying the Coro Agent with JAMF Pro

To deploy the Coro Agent to your macOS endpoints via JAMF Pro, complete the following processes:

1. **Meet the listed prerequisites**
2. **Create and deploy a configuration profile**
3. **Create a deployment package**
4. **Create a deployment policy**

Prerequisites

The following prerequisites are required:

- Functional JAMF Pro environment

You must have a working JAMF Pro environment configured for your endpoints that allows package and configuration profile deployment.

- Download the Coro Agent .pkg file

To download the Coro Agent .pkg file from the Coro console, perform the following actions:

- a. From the toolbar, select **Control Panel**:

- b. Select **Devices**:
