

# Configuring a site-to-site VPN tunnel with Coro Network and FortiGate

As part of a **virtual office**, Coro includes the ability for customers to configure VPNs together with site-to-site tunnels.

This guide describes how to configure Coro to integrate with Fortinet's FortiGate firewall, and how to configure FortiGate to allow traffic for your VPN from both inside and outside the network.

## Prerequisites

Before you start, make sure you have the following:

- Access as an admin user to the Coro console for your workspace
- An active subscription (or trial) for the Coro Network module
- Access to the FortiGate admin interface. Screenshots used in this guide originate from v7.2.6.

## Coro Network configuration

Configure Coro with details of your site-to-site tunnel and firewall:

1. Log into the Coro console.
2. Navigate to **Control Panel > Network**:
