

Configuring a site-to-site VPN tunnel with Coro Network and USG

As part of a **virtual office**, Coro includes the ability for customers to configure VPNs together with site-to-site tunnels.

This guide describes how to configure Coro to integrate with a UniFi Security Gateway (USG) firewall, and how to configure UniFi USG to allow traffic for your VPN from both inside and outside the network.

Prerequisites

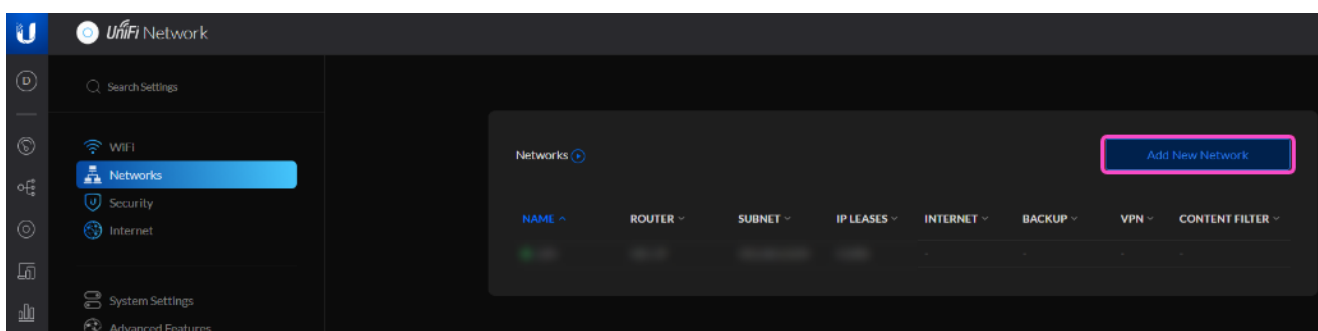

Before you start, make sure you have the following:

- Access as an admin user with sufficient permissions to the Coro console for your workspace.
- An active subscription (or trial) for the Coro Network module.
- Access to the USG configuration interface.

USG configuration

Configure your USG firewall to allow traffic from inside and outside the network:

1. Sign into your USG configuration interface.
2. Go to **Networks > Add New Network**:

3. Configure your **VPN Settings**:

- **Name:** Enter a suitable name for your site-to-site tunnel.
- **VPN Type:** Select "Site-to-Site".
- **VPN Protocol:** Select "Manual IPsec".
- Enable **Enable this Site-to-Site VPN**.
