

# Setting up Coro in Connectwise

This guide describes setting up Coro in Connectwise Automate, enabling administrators to verify Coro's installation status on devices, check the agent's version, and manage remote updates.

ConnectWise Automate is a remote monitoring and management (RMM) solution that provides complete access and control over agent and agentless endpoint devices across your network. You can remotely access endpoint devices, either manually or automatically, without disrupting users while resolving performance and/or security issues. You can setup Coro in ConnectWise Automate

The procedure in this section describes:

1. **Configuring a Coro antivirus entry**
2. **Testing AV configuration on a device**

## Prerequisites

Before you begin this guide, make sure you have:

- An active Coro subscription
- Connectwise Control installed on your device
- A ConnectWise Automate subscription

## Configuring a Coro antivirus entry

To configure a Coro antivirus (AV) entry:

1. Sign into the ConnectWise Control application.
2. Select **System**:
