v2.1.3

Version 2.1.3 provides new features, existing feature enhancements, and fixes.

New features

This section describes the following new features that we are releasing with version 2.1.3:

- **Generate API credentials within the Coro Security Platform**

1 - Generate API credentials within the Coro Security Platform

You can now generate Coro REST API credentials from within the Coro Security Platform. This functionality includes several components that enhance the overall security when generating API credentials:

For further information, see **Managing API credentials**.

Enhancements

This section describes the enhancements that we're releasing with version 2.1.3:

- **Additional Coro REST API endpoints**
- **MSP workspace parent/child hierarchy updates**

1 - Additional Coro REST API endpoints

We have added two additional endpoints to the Coro REST API:

- **GET /v1/workspaces**: Allows API users to retrieve information about their own workspace and any related child workspaces.
- **GET /v1/devices/agents/latest**: Allows API users to retrieve information about the most recent stable agents available for each operating system supported by Coro, including the Coro Agent installation URL.

2 - MSP workspace parent/child hierarchy updates

We have improved the nesting of parent-child workspace relationships in addition to some related functionality in order to facilitate super-channels.
