v1.8

Coro version 1.8 provides new features, enhancements, and fixes:

New features

This section describes the new features that we're releasing with version 1.8.

Disk encryption for macOS

Coro has updated the endpoint agent to support remote disk encryption on macOS systems, to be released in a future version.

Options for Coro agent updates

Workspace admins who wish to upgrade the Coro agent can now see a list of available Coro Agent builds from the Coro Console.

You can also see the release notes of each build, as well as the maturity status of each build, meaning: "BETA" or "STABLE".

For more information, see **Agent deployment**.

Open Zendesk tickets from Coro web console

You can now submit a Zendesk support ticket from the Coro web console. The support ticket form is pre-populated with the workspace ID and the email address of the console admin.

Enhancements

Following are enhancements to existing features that we're releasing with version 1.8:

- More intuitive descriptions have been introduced for some ticket types in the ticket log:
  - For "Malware on Endpoint" tickets, the description is now: "Malware file has been detected and is being quarantined."
  - For the "Infected Process" ticket, it is: "Infected process has been detected and is being terminated."
  - For the "VSS Backup Protection" ticket, it is: "An attempt to delete VSS backup files has been detected and prevented."
