

v1.9.2

Version 1.9.2 provides new features, existing feature enhancements, and fixes.

New features

This section describes the new features that we're releasing with version 1.9.2.

1 - Device labels

Coro now supports the creation of custom device *labels*. Device *labels* can be used to group related devices. Once devices are assigned labels they can be used as *filter criteria* to *search* for related devices. Device labels are displayed for each device in the **Devices** list and in the **Device** details pane:

The screenshot shows the Coro Actionboard interface. On the left, a list of 32 devices is displayed. The first device, 'CORO-SUPPORT (Offline)', is highlighted. To its right, there are two colored squares (green and orange) representing labels. The right pane shows the details for 'CORO-SUPPORT (Offline)'. It includes fields for 'Device', 'Model & ID', 'OS', and 'Hostname'. The 'Coro Protection' section shows 'Version 2.0.152.1 (1.8)' and 'Added Dec 23, 2022'. The 'Last seen' section shows 'Dec 27, 2022 06:35 PM'. The 'Labels' section shows two labels: 'new' (green) and 'test 10' (orange), both with a close button (X).

1.1 - Create and manage labels

Note

Only administrators can create and manage labels.
